

Digital Clinical Trials

Cross-platform solution including administrator modules with a database organized for android and iOS

The S.C.T.M. combines a desktop solution with a mobile device such as phone or tablet. The devices will be preloaded with the clinical trial software. They'll have the same hardware thus guaranteeing & accurate data comparison

The volunteers will use the devices to take standardized pictures of themselves. The face recognition will guarantee a standardized follow up. The volunteers can take notes and have a live chat with the clinical trials team

The video tutorials will ensure that the volunteers will always have clear pre-defined instructions of what is expected of them
